A robust captive population is needed to secure the survival of the American red wolf and support the establishment of new reintroduced populations in the future. To achieve the United States Fish and Wildlife Service's (USFWS) goal of reaching a minimum of 400 captive red wolves and 52 breeding pairs, USFWS awarded Conservation Centers for Species Survival (C2S2) \$257,000 in Recovery Challenge grant funds in 2019 and 2020 toward the construction of new red wolf enclosures. The sub-awardees of the 2019 Recovery Challenge grant are Brookgreen Gardens, Endangered Wolf Center, Fossil Rim Wildlife Center, Saint Louis Zoo, Trevor Zoo, and Zoo Tampa. Fossil Rim Wildlife Center completed the construction of their three new enclosures in late December of 2020.
